

ECO SWING

Recyclable • clean • reliable - the Swing Door can be washed with water and it helps any time to create a hygienic working environment.

Outstanding quality and functionality

The new core material is superior in uniformity and durability of the quality and it creates initial high quality of the product as well as provides the stable quality even for a long time use.

Cope with HACCP! Possible to wash with water.

Same as floor or wall, the Swing Door can be washed with water. It is the most suitable Swing Door for a partition in supermarket or food processing factory where regards a hygiene as important.

New recyclable core material

The Swing Door is easily recycled thanks to making up the new recycling system and the new construction and new core material being easy for disassembling.

The new core material uses **TECCELL**, the honeycomb core in high strength and light weight.

The honeycomb core is an aggregate of cells in hexagon and is dynamically the most excellent sandwich core material. It is said that the strength per unit weight is highest among all structures.
